

Known Issues with RePerform Version 1.1

December 13, 2011

The following is a list of problems currently being addressed by the Zenph engineering team. The first section describes issues that you might experience on either Windows or Mac operating systems. The second section is a list of issues that are Mac specific. The final section lists some of the enhancements that have been suggested.

If you encounter an issue that isn't described here, please send an email to support@zenph.com describing the problem and the steps leading up to it. The *Reporting Problems to Zenph* section in the RePerform User Guide details the information that should be included in your email.

Bug ID Description - Windows or Mac OS

9	Moving cursor can cause hover help to grey out or white out in a cascade
51	Need a user defined or default delay on looped playback
89	Preserve any unprocessed MIDI events on save
102	Issue a warning if the max velocity setting exceeds our recommendation
109	Store the GP Sync setting for the note so that it sticks for the entire session
118	Pedal hover help should activate only when hovering over gesture
213	Horizontal scroll bar button blinks unexpectedly on XP
242	Playback to piano, keys stay down on pause (MOTU specific)
276	Message popup for missing midi playback device gives wrong window focus
280	Playback sound comes and goes on beta customer's DC6 Pro Mark IV
313	Handle transposed notes lower than C1 or higher than C9
350	Handle long left pedal gestures better
362	Saving new pedal gestures creates fewer, longer gestures
377	"Unknown Type" shown in SysEx/Meta display
424	Open dialog/message views in one window block shortcuts in others
434	Modify the requirements to allow loading of 2002 Piano-e-Comp files
457	Unrecognized SysEx event from a DC6 IIXG Pro with DKC-850 controller
458	Unrecognized Yamaha Series ID from a DC6 IIXG Pro with a DSR1 controller

Bug ID Description - Mac OS Specific

87	Mac: Crash when no midi device detected on playback with Mac (beta customer)
352	Mac: Screen refresh leaving Time indicator images on the screen
366	Mac: No default Midi Out device detected for playback
369	Mac: Doesn't detect when the selected Midi device goes missing
442	Mac: Enable the default action for dialogs so <Enter> = OK
617	Mac: Hover help text bleeds through onto Meta and Sysex dialog window

ID Description - Enhancements (this is a partial list)

--	Support multi track (SMF type 1) MIDI files
125	Provide sheet music view
127	Provide group pedal edit control for intensity
128	Provide enhanced transposition feature
